#### **DETAILED ACTION**

### **Specification**

1. The disclosure is objected to because of the following informalities: A brief description of the drawing is required.

Appropriate correction is required.

### Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, it is unclear what is meant by "possibly" and "such as zeolite X, zeolite A, etc." For examination, "possibly" is taken to mean "optionally," "such as..." is taken to mean that any zeolite can optionally be used. Applicant is requested to clarify on the record whether the elements following the phrases are being positively recited or if they are optional. Claims 2-9 are rejected for depending from an indefinite parent claim.

## Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1, 2 and 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Bancon et al. (2003/0126989 A1).

Application/Control Number: 10/583,670 Page 3

Art Unit: 1797

6. Bancon '989 teach a process for removing carbon dioxide, nitrogen oxides, water, and hydrocarbons from an air-based syngas stream, comprising adsorbing the contaminants on an aggregated zeolite adsorbent followed by desorption and regeneration of the material in a PSA or TSA system. The zeolite can comprise over 90% LSX zeolite that is at least 90% sodium exchanged, and 5-10% residual binder that can be zeolitized (see paragraphs 1, 5, 10-12, 17-22). The adsorbent can further be mixed with or include layers of additional zeolite A or NaX in a ratio of 1:19 to 19:1 (paragraphs 11, 28-31 and col. 2, lines 24-51 of US 6,616,732, equivalent of WO 01/24923 cited in paragraph 11). The adsorbent can be prepared by mixing zeolite powder with a binder, drying at 400-700°C and zeoloitizing the binder (paragraphs 13, 14).

# Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bancon et al. '989 in view of Grandmougin et al. (6,616,732).
- 9. Bancon et al. '989 disclose all of the limitations of the claims except that preparation includes washing, drying, and activation at a preferred temperature, and sodium exchange before or after blending. Grandmougin et al. '732 disclose the preparation of a low silica X zeolite for removing carbon dioxide from a gas, comprising mixing 5-95 wt% NaX with 95-5 wt % NaLSX, ion exchanging before or after blending, agglomeration with a binder, drying at 300-700°C, zeolitizing the binder, washing, drying and activating at 300-700°C (see col. 2, lines 35-41, col.

Art Unit: 1797

- 3, lines 13-60). It would have been obvious to one having ordinary skill in the art to modify the preparation method of Bancon et al. '989 by using the washing, drying, activation and exchange steps of Grandmougin et al. '732 in order to provide a more activated sorbent, devoid of water and other impurities that can interfere with adsorption of target contaminants.
- 10. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Bancon et al. '989 in view of Plee (6,264,881).
- 11. Bancon et al. '989 disclose all of the limitations of the claim except that the binder is zeolitized into LSX and/or LSX and X zeolites. Plee '881 discloses the manufacture of aggregated LSX zeolites using binders that convert into LSX zeolite (see abstract, example 3). It would have been obvious to one having ordinary skill in the art to modify the method of Bancon et al. '989 by using the binders of Plee '881 in order to minimize the amount of inert residual binder that does not participate in adsorption.

#### Conclusion

12. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references listed on the attached PTO-892 form disclose LSX zeolites and carbon dioxide removal methods.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Frank M. Lawrence whose telephone number is 571-272-1161. The examiner can normally be reached on Mon-Thurs 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on 571-272-1166. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
